## Referential equality

Suppose you compare two variables with the `===` operator, and the result is `true`.

Does this mean that if you change the value of the first variable, the value of the second one will also change?

**Tip:** Think of all possible cases!

 Code snippets from theory

✓ Correct.

You're doing great!

FEEDBACK:

These variables may point to an immutable like `Int`, so if you do something with one of these, the other will not change.
